

## Financial Hub for high-frequency trading

### Colocate at the heart of the markets

In today's fast-changing, latency-driven marketplace, trading firms need a colocation partner that is perfectly placed to support their objectives, both physically and in terms of service levels, expertise and approach. The ideal partner should have a highly redundant, scalable and secure facility, located in close proximity to key brokers, exchanges and MTFs. They should have a range of low-latency market and reference data and connectivity options, industry-leading implementation and SLAs, and a sound understanding of the sector. All at competitive rates.

Interxion Financial Hub – our solution for the capital markets - provides all this and more. It puts high-frequency traders where they need to be – at the heart of the markets.

### Exceptional proximity

Interxion's Financial Hubs are strategically located in all of Europe's key financial centres. They house a large and growing community of brokers, exchanges and MTFs. Our Financial Hubs in London and Paris, for instance, offer the lowest latency to the top two European trading venues of any independent location, and provide low-latency access to the majority of Europe's trading venues.

### Better connections, lower costs

Latency can be optimised and network costs managed down by installing direct cross-connects to trading partners within the Financial Hub. Further afield, our carrier neutrality enables low-latency connectivity to liquidity venues, with 350 Network Service Providers across our European footprint. In our Financial Hubs this includes all of the specialist providers to the financial services industry.

### Maximum security & availability

Interxion Financial Hubs are based in ultra-secure, state-of-the-art facilities. They have multiple layers of security, including man traps, CCTV and 24-hour access control. They offer high-density

### Key benefits

- Proximity hosting to key brokers, exchanges and MTFs
- Lowest latency to the top two European trading venues of any independent location
- Wide choice of Network Service Providers for ultra-low-latency dark fibre, WDM and Ethernet services
- Industry-leading security and redundancy levels
- Bespoke SLA
- Seamless scalability internally and internationally
- Access to a community of specialist service providers
- Test Lab for latency assessment, optimisation and innovation

power configurations and redundancy levels of N+1 or N+N as standard. All Interxion facilities deploy sophisticated Site Management Systems for integrated monitoring and have been accredited to the independently-assessed ISO 27001 standard for information security and business continuity.

### Seamless scalability

Interxion offers easy in-house and pan-European scalability. We operate over 55,000 m<sup>2</sup> of equipped space in 11 countries across Europe, and are constantly expanding and upgrading facilities. Cross-border customer expansion could not be easier with only one contract and SLA required. Service-level management and customer reporting is taken care of by Interxion's unique, multilingual European Customer Service Centre.

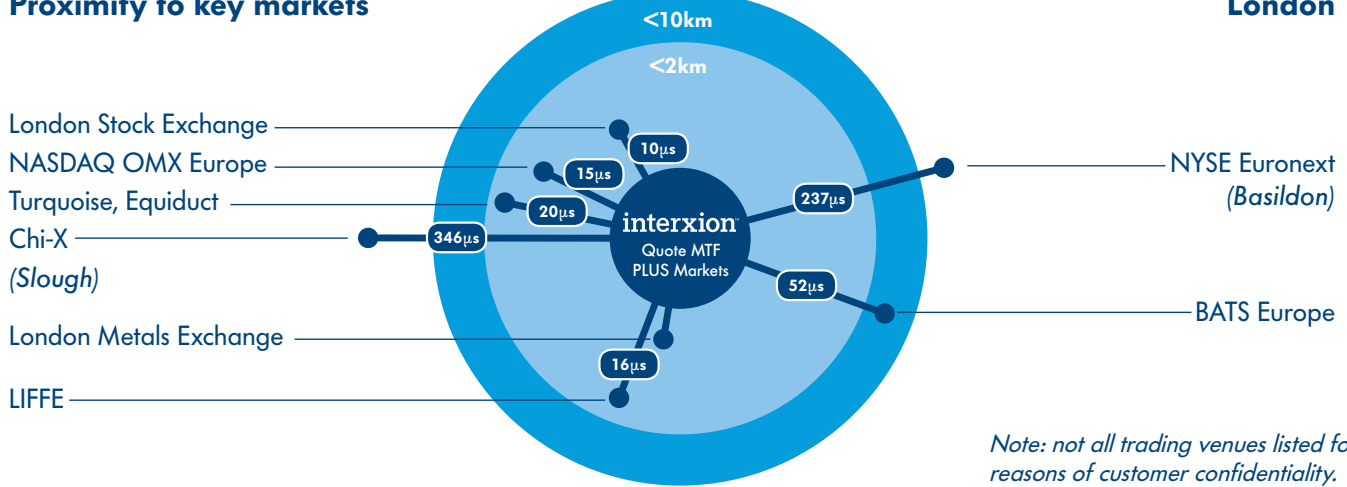

### Specialist support & innovation

Customers can easily interconnect to valued-added service providers based in our Financial Hubs. These include a wide array of services such as order routing networks, SORs, risk management, direct-feed handling and infrastructure management. We also provide a Test Lab, with dedicated cabinet space, in which customers can optimise existing applications, develop and test new products, and assess latency.
